

Safecoat Outgassing Control Sealers

As we are increasingly aware, today's building materials and coatings are loaded with toxic chemicals. These chemicals include acetone, formaldehyde, methanol, toluene, benzene, xylene and styrene. Even so-called "environmental zero VOC coatings" can still contain toxic materials that are unregulated. Safecoat makes unique sealers specifically designed to prevent the outgassing of harmful chemicals. Safecoat offgassing control sealers eliminate the toxic solvents, heavy metals and formaldehyde found in ordinary paints and sealers, and create a protective layer that reduces offgassing from the surface below.

Hard Seal

Safecoat Hard Seal is a multi-use, clear gloss sealer especially formulated to provide mar resistance to both low- and high-porosity surfaces. Because it forms a continuous membrane when applied properly it is particularly effective at sealing in any pollution or toxic chemical compounds outgassing from the surface to which it is applied.

Safe Seal SCS CERTIFIED - LEED QUALIFIED

Safecoat Safe Seal is a water-based, low-gloss sealer highly effective at sealing in formaldehyde outgassing from processed wood such as plywood, particle board and pressed wood. Safecoat Safe Seal is virtually odorless on application and odorless once cured. Note that Safe Seal is not intended for use as a top coat clear finish for surfaces that receive traffic. It can be used as a prep sealer under Safecoat coatings if desired.
