Why our pure white paint is green:

For starters, we make the only paints that are doctor recommended. Our formulations were developed with a healthy respect for nature – all AFM products meet or beat LEED and Green Seal standards. ✪ "Building a Healthier World" is more than our tagline, it's our history – our company began developing formulations for the chemically sensitive nearly 30 years ago. We continually strive to raise the bar by creating the safest, most non-polluting products for your home, your health and the planet. ✪ This commitment extends to our full line of chemically responsible building and maintenance products – from our Safecoat paints, primers, natural stains, finishes, sealers and adhesives to our SafeChoice cleaners. ✪ Whether you're a contractor or a homeowner looking for green products – in any color – put your trust in AFM, it's all we make.

Health. Quality. Sustainability.

AFM Safecoat paints, stains and clear finishes are Scientific Certification Systems Indoor Advantage-Gold certified, the highest environmental certification standard available. This means they meet USGBC LEED criteria for EOA-1, EOA-2 and EOA-5, as well as standards for California 01350 and the Collaborative for High-Performance Schools.
